

iERP.ai

Your AI business prediction platform

Jozef Balaz, CEO & Co-founder

Our challenge:

Reducing waste in fresh produce

MIGROS

Problem

Wasted fresh produce

46%

worth over

1 Trillion

There isn't any other industry
with such an **inefficiency**

Who we are

Our algorithms:

Sales forecasting

Late payment predictions

Verticals:

Retail

Manufacturing

The screenshot shows the iERP.ai Studio web application. The top navigation bar includes the iERP.ai logo, a "Project" tab, and a "Trainer" tab. Below the navigation bar, there are links for "Select / Create", "Details", "Algorithm", "Sources", "Columns", "Data", and a "Forecasting" link. The main content area is titled "Forecasting Testing" and displays a table with the following data:

| Product ID | Customer ID | Recommended Discount | Maximum Discount | Management Discount | Last Sale Date | Last Sale Date General |
|------------|-------------|----------------------|------------------|---------------------|----------------|------------------------|
| 040-3445 | ADDISON | 18.0% | 18.0% | 18.0% | N/A | 2018-02-15 |

Below the table, there is an "Add a row" button. Further down, there are two tabs: "CSV output" and "Studio API", with the latter being selected. Under the "Studio API" tab, there is a section titled "Start API server" which includes a "Token:" label and a text input field containing a long alphanumeric string. At the bottom, there is a note stating: "This API server can be accessed on any available address and chosen port. Open localhost:5550/docs for documenta. Note: API server will be stopped when Studio application is closed."
